

Datalere Initiate MVP Program

Empowering the Use of Machine Learning for the Enterprise

Organizations that take advantage of machine learning solutions will thrive in this modern economy. Datalere's Data Science team has been helping organizations do just that for over 10 years.

Our Initiate MVP Program helps your organization get started by providing education and a minimum viable product that can both be used to support larger machine learning initiatives. This "proof of value" base program gives your organization the jumpstart and confidence they need to rapidly start to deploy impactful solutions.

HOW OUR INITIATE MVP PROGRAM WORKS

- **Phase 01: Two Day Machine Learning Hands-On Workshop**
Invite the broader teams from throughout the enterprise as we take you from basic fundamentals to advanced techniques for implementing machine learning. Supported by over six hands-on labs, attendees will leave the workshop with the knowledge needed to initiate cohesive programs.
- **Phase 02: Identification, Discovery and Planning of a Key Application for MVP**
We work with your team to identify a well defined business use case tied to actionable outcomes. From there we create detailed requirements and develop a plan for success.
- **Phase 03: Implementation of MVP Program**
Using best practices for agile deployments, the Datalere Data Science team will work in conjunction with your technical team to implement a solution that is durable and cost effective while using the latest innovation for machine learning deployment.
- **Phase 04: Executive Readout Session**
This session, estimated at two hours, provides an executive readout of the program. During this time we will present the MVP solution, an overview of the project and recommendations tied to ROI for future operationalization and enhancements.

DELIVERABLES

- A curated, architected machine learning solution that can be operationalized.
- An architected cloud environment (where applicable).
- Executive Readout including project overview, recommendations for future growth and operationalization tied to ROI.

THE BENEFITS OF OUR INITIATE MVP PROGRAM

This four to six week program provides:

- A functional proof of value solution built for growth that can be used to secure future funding of machine learning initiatives.
- Education of data teams in the use of machine learning and best practices.
- Mentoring of key staff throughout the program.
